

Week 1 Foundations Scorecard

Purpose

이 평가표는 Week 1 산출물이 컴퓨팅 spine, 실행 증거, handoff, 학술/현업 기준을 충족하는지 확인한다.

Critical Gates

Condition	Verdict
secret, token, password, MFA code, payment information exposed	rebuild_required
paid API or cloud resource required for Week 1 deliverable	rebuild_required
mini app cannot run from README	repair_required
no command/status/log evidence	repair_required
Docker/AWS/Kubernetes/DORA/Well-Architected taught as standalone Week 1 topic	repair_required
no mapping to computing spine	repair_required

0/1/2 Rubric

Criterion	0	1	2	Evidence
computing_spine	terms missing	partial mapping	local evidence mapped to future platforms	mapping note
reproducibility	cannot run	runs with missing context	clean start/check/stop documented	README
observability	no evidence	screenshot only	command, status, log/RCA	log/status/RCA
professional_handoff	vague explanation	README only	README, risk, blocker, next action	handoff pack
security_cost_safety	unsafe exposure	principle only	no secret, no paid dependency	scan/note
academic_alignment	decorative links	some outcomes	observable action and scoring evidence	day academic files

Academic/Workforce Mapping

Standard	Week 1 observable action	Artifact
ABET-style computing practice	Use computing tools and document evidence	repo, README, command output
ABET-style communication	Explain service execution to another operator	presentation card
CS2023 competency	Apply systems concepts to a running service	computing spine note
NIST NICE-style task/skill	Identify access, secret, and system-state risks	risk table
Bloom apply/analyze/evaluate	Run, inspect, diagnose, justify scope	RCA and mapping note
