

Architecture 06: PostgREST API + PostgreSQL

PostgreSQL table을 REST API로 노출하는 Compose template이다. 앱 코드를 직접 작성하지 않아도 api service가 db service name으로 PostgreSQL에 연결해야만 API가 응답한다.

Run

```
docker compose config
docker compose up -d
docker compose ps
```

Check

```
curl -s http://localhost:18090/tasks
docker compose logs api --tail 40
docker compose logs db-checker --tail 20
```

Expected:

```
"title": "read compose.yaml"  
SELECT id, title, status FROM api.tasks
```

Cleanup

```
docker compose down  
# data reset이 필요할 때만  
# docker compose down -v
```

down -v는 pgdata volume을 삭제한다.
