

Architecture 07: Frontend + Gateway + API + DB

Week 3 MSA로 넘어가기 전 마지막 Compose template이다. browser traffic은 gateway로 들어오고, gateway는 static frontend와 API path를 나눈다. API는 service name db로 PostgreSQL에 연결한다.

Run

```
docker compose config
docker compose up -d
docker compose ps
```

Check

```
curl -s http://localhost:18091 | grep week2-day5-msa-preview
curl -s http://localhost:18091/api/services
docker compose logs gateway --tail 40
docker compose logs api --tail 40
```

Expected:

```
week2-day5-msa-preview  
"name": "gateway"  
"name": "api"
```

Cleanup

```
docker compose down  
# data reset이 필요할 때만  
# docker compose down -v
```

down -v는 PostgreSQL volume을 삭제한다.
