

# Week 2 Day 5 Integration App

---

## Purpose

---

이 앱은 Week 2 Day 5 통합 실습용 표준 정적 웹 앱이다. 목표는 새 기능 개발이 아니라 Dockerfile, image build, tag, run, Compose, security note, cleanup, README handoff를 하나의 증거 묶음으로 닫는 것이다.

## File Map

---

| Path            | Purpose                        |
|-----------------|--------------------------------|
| Dockerfile      | nginx 기반 image build 기준        |
| .dockerignore   | build context에서 제외할 파일 기준      |
| compose.yaml    | local Compose 실행 기준            |
| html/index.html | HTTP body marker를 제공하는 정적 파일   |
| README.md       | start/check/cleanup/handoff 기준 |

## Build

---

```
docker build -t paperclip/week2-day5-integration:local .
```

Expected:

```
Successfully tagged paperclip/week2-day5-integration:local
```

## Run

---

```
docker run -d \  
  --name paperclip-day5-web \  
  -p 18085:80 \  
  paperclip/week2-day5-integration:local
```

## Check

---

```
docker ps --filter name=paperclip-day5-web
for i in 1 2 3 4 5; do
  curl -I http://localhost:18085 && break
  sleep 1
done
curl -s http://localhost:18085 | grep week2-day5-integration-v1
docker logs paperclip-day5-web
```

Expected:

```
0.0.0.0:18085->80/tcp
HTTP/1.1 200 OK
week2-day5-integration-v1
```

## Compose

---

```
docker compose config
docker compose up -d
docker compose ps
for i in 1 2 3 4 5; do
  curl -I http://localhost:18085 && break
  sleep 1
done
curl -s http://localhost:18085 | grep week2-day5-integration-v1
```

## Tag Flow

---

```
docker tag paperclip/week2-day5-integration:local paperclip/week2-day5-
integration:v1
docker images paperclip/week2-day5-integration
```

Do not push to a public registry unless the instructor explicitly asks for it and the image contains no secrets or private data.

## Cleanup

---

```
docker rm -f paperclip-day5-web
docker compose down
```

Optional local image cleanup:

```
docker image rm paperclip/week2-day5-integration:local
docker image rm paperclip/week2-day5-integration:v1
```

## Security Notes

---

- Do not copy .env, credentials, tokens, SSH keys, or personal files into the image.
- Keep .dockerignore small but meaningful.
- Use explicit image tags for 확인 지점.
- Do not treat latest as enough 확인 지점 for a class submission.
- Do not publish an image before checking its contents and README.

## 주의할 점 체크리스트

---

- [ ] docker build completed.
- [ ] local image tag exists.
- [ ] docker run served HTTP 200.
- [ ] body marker week2-day5-integration-v1 was observed.
- [ ] docker compose config passed.
- [ ] docker compose up -d served the same app.
- [ ] cleanup command was run.
- [ ] README includes run/check/cleanup.
